Noise-Induced Hearing Loss: What Your Patients Don't Know Can Hurt Them
By Gina Shaw
Recent CDC reports show how daily noise exposure alarmingly contributes to hearing damage. How can hearing health professionals help address noise-induced hearing loss, and what are some preventive tools available? Read More.

Can Hearing Aids Affect the Emotional Response to Sound?
By Erin M. Picou, AuD, PhD; Gabrielle H. Bruno; and Maureen L. Virts
Sensorineural hearing loss affects not only sensory but also emotional processing, but hearing aids can help people with hearing loss overcome one but not the other. Read More.

Auditory Biomarker Identified for Early Cognitive Impairment
By Gavin M. Bidelman, PhD, and Claude Alain, PhD
Besides hearing loss, audiologists can use objective measures like brainstem or cortical speech-evoked potentials to help aging patients identify and manage early cognitive impairments before they develop into something more serious. Read More.

Communication Strategies for a Successful Practice
By Raymond H. Hull, PhD
Superior skills and knowledge are not enough to stand out anymore; audiologists now need to cultivate effective communication both within and outside of their practices. Dr. Hull shares tips on how to build a good public image and a successful practice. Read More.

Added Value of Patient-Centered Hearing Care
By Nancy M. Williams, MBA
Patient-centered hearing care will become increasingly important with the introduction of OTC hearing aids. Audiologists may have to make certain investments to adjust to this new emphasis on service delivery, but the payback potential far outweighs the cost. Read More.

What Visual Snow May Tell Us About Tinnitus
May 9, 2017
New research suggests that visual snow syndrome may be to the visual system what tinnitus is to the auditory system. Read More.

Evidence-Based Audiology Focus on Hearing Loss Prevention
By Thais C. Morata, PhD
While many companies comply with legal or obligatory requirements and implement required noise interventions, few publications documenting the effectiveness of these actions exist, especially in audiology and occupational health. Read More.

LATEST COLUMNS

Editorial: Meditation and Tinnitus
By Jennifer J. Gans, PsyD
Mindful meditation helps break unhealthy mental habits through focusing our attentions, and it can help convert the negative thoughts arising from tinnitus to positive ones the same way. Read More.

Journal Club: Daily Sound Awareness of CI Users
By Valeriy Shafiro, PhD; Michael S. Harris, MD; and Aaron C. Moberly, MD
Even CI users with high speech recognition scores have trouble identifying common environmental sounds, which contribute significantly to different aspects of life. Researchers have come up with training that will help CI users heighten that ability. Read More.

Golden Rules: Revising the Hearing Health Care Delivery System
By Barbara Weinstein, PhD, and Michael J. Bernstein, PhD
The flurry of action surrounding OTC hearing aids has stirred up a question about the future of care delivery and the hearing aid market; Dr. Weinstein said it might not be about how to change the market but how to optimize it. Read More.

Clinical Consultation: Symptom: Right-Sided Hearing Loss
By Hamid R. Djalilian, MD
A 25-year-old man presents with right-sided hearing loss that began after a car accident. He was told there was bleeding in his ear after the accident. What's the diagnosis? Read More.

Hearing Matters: Do Concussions Leave a Lasting Imprint on the Hearing Brain?
By Nina Kraus, PhD, and Travis White-Schwoch
A major challenge in determining whether repeated concussions leave lasting damage on the brain is the diagnosis cannot be made until after a post-mortem evaluation of the brain. Read More.
